Food Safety Information

Foodborne Illness Peaks in Summer - Why?

Yes, foodborne illnesses do increase during the summer, and the answer appears to be twofold. First, there are the natural causes. Bacteria are present throughout the environment in soil, air, water, and in the bodies of people and animals. These microorganisms grow faster in the warm summer months. Most foodborne bacteria grow fastest at temperatures from 90 to 110 °F. Bacteria also need moisture to flourish, and summer weather is often hot and humid.

Given the right circumstances, harmful bacteria can quickly multiply on food to large numbers. When this happens, someone eating the food can get sick.

Outside activities increase. More people are cooking outside at picnics, barbecues, and on camping trips. The safety controls that a kitchen provides -- thermostat-controlled cooking, refrigeration, and washing facilities -- are usually not available.

Fortunately, people seldom get sick from contaminated food because most people have a healthy immune system that protects them not only from harmful bacteria on food, but from other harmful organisms in the environment. At the same time, FSIS, other government agencies, and food producers go to great lengths to keep food safe. And, of course, consumers can protect themselves at home with proper refrigeration and thorough cooking of perishable food.

We know foodborne illness increases in warm weather. We also know that consumers can Fight BAC!® by following these four simple steps to safer food in the summertime.

Clean: Wash Hands and Surfaces Often.

Unwashed hands are a prime cause of foodborne illness.

- Wash your hands with warm, soapy water before handling food and after using the bathroom, changing diapers, and handling pets.
- When eating away from home, find out if there’s a source of potable (safe drinking) water. If not, bring water for preparation and cleaning. Or pack clean, wet, disposable washcloths or moist towelettes and paper towels for cleaning hands and surfaces.

Separate: Don’t Cross-Contaminate.

Cross-contamination during preparation, grilling, and serving food is a prime cause of foodborne illness.

- When packing the cooler chest for an outing, wrap raw meats securely; avoid raw meat juices from coming in contact with ready-to-eat food.
- Wash plates, utensils, and cutting boards that held the raw meat or poultry before using again for cooked food.

Cook: Cook to Proper Temperatures.

Food safety experts agree that food is safely cooked when it is heated for a long enough time and at a high enough temperature to kill harmful bacteria that cause foodborne illness.

- Take your thermometer along. Meat and poultry cooked on a grill often browns very fast on the outside, so be sure that meats are cooked thoroughly. Check them with a food thermometer.
Food Safety Questions?

Call the USDA Meat & Poultry Hotline

If you have a question about meat, poultry, or egg products, call the USDA Meat and Poultry Hotline toll free at 1-888-MPHotline (1-888-674-6854)
The hotline is open year-round

Send E-mail questions to MPHOTLINE.fsis@usda.gov.

Monday through Friday from 10 a.m. to 4 p.m. ET (English or Spanish).
Recorded food safety messages are available 24 hours a day.
Check out the FSIS Web site at www.fsis.usda.gov.

Ask Karen!

FSIS’ automated response system can provide food safety information 24/7 and a live chat during Hotline hours.

PregunteleaKaren.gov

Chill: Refrigerate Promptly.

Holding food at an unsafe temperature is a prime cause of foodborne illness. Keep cold food cold!
- Cold refrigerated perishable food like luncheon meats, cooked meats, chicken, and potato or pasta salads should be kept in an insulated cooler packed with several inches of ice, ice packs, or containers of frozen water.

Leftovers?

Food left out of refrigeration for more than 2 hours may not be safe to eat. Above 90 °F, food should not be left out over 1 hour. Play it safe; put leftover perishables back on ice once you finish eating so they do not spoil or become unsafe to eat.

If you have any doubts, throw it out.
