USDA is an equal opportunity provider, employer, and lender.
Issued January 2022 | Program Aid No. 2262-BRS
Biotechnology Regulatory Services is a vital program of the U.S. Department of Agriculture. We work at the forefront of science and innovation.

As the world changes and technology advances, so does American agriculture. From drought-tolerant corn and insect-resistant crops to canola that produces healthier oils, people are developing new products every day using genetic engineering. We make sure they don’t pose a risk to U.S. agriculture or the environment. Working with other Federal agencies, we set regulatory requirements for these products; oversee their safe import, interstate movement, and environmental release and field testing; and ensure our system keeps pace with the latest science, issues, and challenges.

Our employees are national leaders in the ever-evolving field of biotechnology, with a broad range of talents and expertise. We seek highly motivated people from all educational backgrounds to join our team. If you thrive on challenge and change, come find your future with us!

We Hire:
- Plant biologists, breeders, and geneticists
- Field inspectors and compliance specialists
- Microbiologists
- Document management specialists
- Administrative and resource management specialists
- Entomologists
- Communication specialists
- Plant pathologists
- Risk assessors
