Smuggling, Interdiction, and Trade Compliance Program

Safeguarding History
In today’s global marketplace, the borders between countries are beginning to disappear. International travel and trade take place in larger numbers and with fewer restrictions than ever before, bringing an average of 435,000 people into the United States each day. However, this huge volume of people and products often brings with it real threats to American agricultural and natural resources. These threats include foreign pests and diseases that could devastate these resources.

While Americans have grown accustomed to seeing healthy varieties of food at supermarkets, diverse selections of plants at their local nurseries, and marvelous animals, trees, and ornamental plants at local zoos and parks, people do not always realize the protective measures the U.S. Department of Agriculture’s (USDA) Animal and Plant Health Inspection Service (APHIS) and other agencies take to preserve these environmental and agricultural resources.

APHIS wants to ensure the availability of domestic and imported foods in the marketplace, facilitate the exportation of agricultural commodities to foreign countries, and preserve the health and diversity of our agricultural resources. In response to the growing volume of smuggled and improperly imported agricultural products entering the United States, APHIS created Plant Protection and Quarantine’s (PPQ) Smuggling, Interdiction, and Trade Compliance Program (SITC). The SITC program’s mission is to identify the unlawful entry and distribution of prohibited agricultural products. These products may harbor harmful exotic plant and animal pests, diseases, or invasive species that could seriously damage America’s crops, livestock, and environment.

SITC History
In the mid 1990s, Asian fruit growers from the Homestead, FL, area complained to PPQ’s Deputy Administrator about illegally imported specialty crops from Thailand, specifically lichee and longans, flooding the New York markets. The agricultural products in New York eliminated the commodities’ shipping costs from Florida and adversely affected many growers in the region. PPQ and APHIS Investigative and Enforcement Services (IES) formed a team that determined the prohibited items from Thailand were being smuggled through the Canadian border in enormous quantities. These prohibited products were being offered for sale in the New York City market areas and were definitely competing with domestic and legal production.

PPQ team members intercepted the prohibited material crossing the Canadian border, and IES agents prosecuted the violators taking part in the shipping operation. In the first 2 years of the program, more than 68 tons of prohibited Asian fruit were seized and destroyed.

Los Angeles SITC Work Unit
Area of coverage and information contact for Los Angeles-Pacific
Area of Coverage:
The California counties of Fresno, Kern, Kings, Los Angeles, Madera, Mono, Orange, Riverside, San Bernardino, San Luis Obispo, Santa Barbara, Tulare and Ventura

Information Contact:
SITC Supervisor
USDA, APHIS, PPQ, SITC
5871 Rickenbacker Road
Commerce, CA 90040
Phone: (323) 726-4600 or 4650
Fax: (323) 726-4601 or 4651

The success of this operation led to the expansion of the program and development of specific position descriptions for PPQ liaison officers. A PPQ liaison officer is a PPQ officer who, in addition to their regular PPQ officer duties, works with IES investigators to identify and close the pathways of the unlawful entry and domestic distribution of prohibited foreign agricultural products into the United States. These positions were established nationwide in small numbers and organized into a network of officers whose main function was to detect and close smuggling pathways.

With new positions and a growing challenge, PPQ established two additional satellite programs: Closing the Los Angeles Marketplace Pathway (CLAMP) and Florida Interdiction and Smuggling Team (FIST). State and Federal officials in the CLAMP program were tasked to detect smuggled fruit-fly host material and close the pathway of that harmful pest. FIST, on the other hand, had objectives much larger in scope. Both programs effectively
sealed off pathways for potential exotic pest introduc-
tions into the United States. As the organization
became more successful and was recognized as an
additional regulatory force within PPQ, it was reorgan-
ized into the current Smuggling, Interdiction, and
Trade Compliance program.

**SITC Partners**

SITC officers nationwide shut down illegal path-
ways and agriculture distribution points in many ways.
The unit routinely works with agents from the U.S.
Department of Homeland Security (DHS) Customs
and Border Patrol (CBP) during agricultural antismug-
gling and cooperative interdiction efforts at air, land,
and sea ports-of-entry.

Besides port operations, teams of officers conduct
local domestic market surveys, canvassing markets
and grocery stores around the country seeking pro-
hibited agricultural commodities. When agents have
evidence a regulation has been violated, they turn the
case over to APHIS’ IES unit and USDA’s Office of the
Inspector General for prosecution. If warranted,
APHIS will pursue civil and criminal penalties. The
agency’s efforts have led to grand jury indictments
and Federal sentencing, hundreds of thousands of
dollars in fines, and seizures of prohibited agricultural
products valued at several million dollars. If vendors
aren’t aware they’re selling prohibited items, the onsite
official will explain Federal regulations and begin the
importation trace to find the illegal pathway.

Domestic market surveillance and port inspec-
tions are highly effective methods to deter smuggling,
but there are times when the unit resorts to other
measures. As needed, SITC officers and other PPQ
employees conduct trade verification operations and
stepped-up inspections of cargo, passenger vehicles,
and mail packages to seal off the flow of goods into
the United States. Working with each State’s depart-
ment of agriculture, and other Federal agencies such
as CBP, U.S. Fish and Wildlife Service, U.S. Food and
Drug Administration, and USDA’s Food Safety and
Inspection Service, the SITC unit achieves compli-
cance with regulations through comprehensive investi-
gations, sound enforcement, and strong outreach
efforts. The education and outreach campaigns target
importers, market owners, transportation companies,
retailers, and the general public.

**SITC At Work**

In fiscal year (FY) 2004, the SITC program was
responsible for seizing and destroying 213,980
pounds of prohibited agricultural material. Its effec-
tiveness in shutting down smuggling pathways has
supported its main mission of protecting American
agriculture and protecting our agriculture export
industry.

**What You Can Do**

If you become aware of potential smuggling of
prohibited exotic fruits, vegetables, or meat products,
you can help by contacting the confidential Hotline
number at 1–800–877–3835 and leaving a detailed
message and contact telephone number. USDA
protects the confidentiality of all information sources.

The U.S. Department of Agriculture (USDA) prohibits discrimination
in all its programs and activities on the basis of race, color, national
origin, age, disability, and where applicable, sex, marital status,
familial status, parental status, religion, sexual orientation, genetic
information, political beliefs, reprisal, or because all or part of an
individual’s income is derived from any public assistance program.
(Not all prohibited bases apply to all programs.) Persons with dis-
abilities who require alternative means for communication of pro-
gram information (Braille, large print, audiotape, etc.) should con-
tact USDA’s TARGET Center at (202) 720–2600 (voice and TDD).
To file a complaint of discrimination, write to USDA, Director, Office
of Civil Rights, 1400 Independence Avenue, S.W., Washington, D.C.
20250–9410, or call (800) 795–3272 (voice) or (202) 720–6382
(TDD). USDA is an equal opportunity provider and employer.
